Fill in the blanks to outline the flow of blood. Use words corresponding to the structures in parentheses after each blank.

1. Blood flows from the body, through the \textit{Vena cava} (vessel) into the \textit{right atrium} (chamber). From here, it is pumped through the \textit{tricuspid} (valve) to the corresponding ventricle. It is then pumped out through the \textit{Pulmonary artery} (vessel) to the lungs, then back through the pulmonary veins into the \textit{left atrium} (chamber).
